# Natural Resource Management – Look at Landcare now!

Noosa & District Landcare has evolved over the last 17 years to become a highly reputable and dynamic group with a demonstrated track record.

Noosa Landcare delivers a wide range of environmental services throughout the Burnett, Mary,

Noosa River and Sunshine Coast Catchments.

Our community's understanding of the importance of their natural environment is growing, and landholders and business owners increasingly are making environmental investments through on ground works and donations.

Noosa Landcare promotes conservation and sustainability by offering a range of environmental services delivering tangible outcomes, and also undertakes targeted educational programs to increase community awareness and capacity.

## Looking to the Future...

And the future is theirs... We are working to instill in young people a love of the natural environment, and to build the skills and desire to conserve and sustain it.

**Noosa Landcare promotes** the value, protection and rehabilitation of the Sunshine Coast and Noosa Biosphere Reserve, to provide a healthy, sustainable environment for future residents.

**Noosa Landcare promotes** the adoption of sustainable land use and best management practices.

**Noosa Landcare assists** in the preservation of water quality and waterway health in the region's natural waterways.

**Noosa Landcare educates** tomorrow's land carers through school based educational programs and on the job traineeships.

**Noosa Landcare provides** environmental activities for wider community participation.

## Memberships and Donations

**\$22** "Standard" membership (quarterly newsletters, informative articles, free workshops)

**\$52** "Plants Plus" membership (standard membership plus \$30 donation to NDLG public fund to assist with the planting of trees)

Noosa Landcare as an ATO deductible gift recipient accepts donations to its public fund. All donations over \$2 are tax deductible.

Your donation will be used to plant trees, to help reduce your carbon emissions. Planting trees creates vegetation corridors to support our native flora and fauna, increases biodiversity, reduces erosion and helps lower soil salinity levels.

Membership forms can be downloaded from our website : [www.noosalandcare.org](http://www.noosalandcare.org)
