

MEDIA RELEASE

Noosa & District Landcare Group Inc receives \$9,953 via the Low Carbon Diet (LCD) Community Funding Program!

Funding of more than \$9,000 has been received by Noosa & District Landcare Group from the Queensland Government to raise public awareness in ways to reduce their household carbon emissions.

This grant was obtained via the Queensland Government's Low Carbon Diet (LCD) Community Funding Program which supports organisations such as community groups, local councils and tertiary institutions to implement the Low Carbon Diet, a program to help reduce Queenslanders' carbon footprints.

The Noosa & District Landcare Group will help Northern Sunshine Coast residents to establish and reach their goals for reducing their greenhouse gas emissions, while also saving money on electricity and water bills. They will be in contact with their members and local schools in the near future to start their program.

Community groups across Queensland are encouraged to get involved in this statewide challenge to minimise climate change and our impact on the environment.

Eligible community funding organisations include not-for-profit incorporated community groups, local councils and tertiary institutions throughout Queensland.

More information about the Low Carbon Diet Community Funding program is available from www.climatesmart.qld.gov.au.
