Acacia falcata SILVER-LEAVED WATTLE

Medium shrub or small tree to 3m. Pale yellow flowers autumn to winter. Fast growing re-vegetation species. Hardy and adaptable.

Acacia suaveolens SWEET WATTLE

Small open shrub 1– 2m; sweet scented pale cream flowers over long period May–Nov attract birds; attractive violet to blue-black seed pods. Hardy in well drained coastal soils but also grows on deeper/heavier soils.

Alocasia brisbanensis CUNJEVOI

Rainforest clumping plant with large spade-like leaves. Fragrant but poisonous yellow-green flower – juicy but toxic sweet-smelling red fruit. Prefers semi-shaded moist sites; soil type not critical.

Allocasuarina littoralis BLACK SHE-OAK

Open forest tree to 10m, black fissured bark. Hardy, adaptable and fast growing in variety of sites. Black cockatoo feed tree, suitable for cabinet work.

Allocasuarina torulosa ROSE SHE-OAK

Medium tree slender and pyramidal 10 – 25 metres. Food tree for Black Cockatoos. Hardy and adaptable; suitable for moist rich or nutrient-deficient sandy soils; frost tolerant.

Alpinia caerulea NATIVE GINGER

Clumping plant to 1.5m. Understorey species, likes shady moist site. Bright blue berries attract birds. Fruit, leaves and tuberous roots are edible and make a tasty addition to salads.

Araucaria cunninghamii HOOP PINE

Rainforest tree to 50m. Trunk straight, timber highly prized. Hardy, slow growing unless well fertilised. Needs good drainage. Excellent tub plant.

Austromyrtus dulcis MIDYIM

Low spreading shrub to 50cm, adaptable to most soils, dry or moist, sun or part shade. Masses of white flowers during spring and summer, followed by white, edible sweet berries; attractive reddish new growth.

Banksia integrifolia COASTAL BANKSIA

Medium tree to 15m, hardy in a variety of soils, prefers good drainage. Ornamental yellow cylindrical flower spikes, bird and insect attracting.

Breynea oblongifolia COFFEE BUSH – DWARFS APPLE

Openly branched shrub from 1 –2 metres. Tiny green pendulous flowers September to December followed by bright red bird-attracting berries. Hardy and adaptable to a range of well-drained soils; prefers some shelter.

Callitrus columellaris BRIBIE ISLAND CYPRESS, COASTAL CYPRESS PINE

Medium to large conical tree to 20 metres. Attractive coppery, winged seeds. Moderately fast growing; hardy in a variety of situations; suits sandy well-drained soils; durable timber tree, termite resistant; cones attracts cockatoos, rosellas and galahs.

Callerya megasperma NATIVE WISTERIA

Vigorous, woody rainforest climber. Pendulous clusters of pale purple and white flowers in spring. Hardy and fast growing with adequate moisture.

Callicarpa pedunculata VELVET LEAF

Small openly branched shrub 1-2m. Fast growing and reasonably hardy but dislikes extreme cold or exposure. Prune regularly to keep bushy shape. Attractive small purple fruit attract birds; useful screening shrub.

Castanospermum australe BLACK BEAN

Handsome tree with shiny leaves and brilliant flowers 15 -20m. Prefers rich, well drained soil with ample moisture but is very adaptable. Full sun and light frost is tolerated. 'Chestnut like' seed was a food source for Aborigines but only after extensive soaking, leaching and roasting to remove the toxic saponin.

Casuarina cunninghamiana RIVER SHE-OAK

Medium graceful tree 10 – 30 metres. Rusty-brown male flowers — dark red female flowers (*Male and female flowers on separate tree*) attract birdlife. Adaptable, fast growing and hardy.

Casuarina equisetifolia HORSETAIL SHE-OAK

Coastal tree to 10m with graceful, drooping foliage, important for sand dune stabilisation. Not an easy species to grow away from the coast.

Casuarina glauca SWAMP SHE-OAK

Small ornamental tree 6 – 16 metres. Food source for black cockatoos, lorikeets and rosellas. Male and female flowers on separate trees. Strong growing and hardy in a variety of conditions.

Choricarpia subargentea GIANT IRONWOOD – SCRUB IRONWOOD

Medium sized rare rainforest tree ± 20m; small creamy/white flowers in dense heads in April; fruit a dry capsule; bark an orange/brown or pinkish/mauve colour. Hardy; tolerates full sun and poor soil; frost tolerant.

Cordyline rubra RED-FRUITED PALM LILY

Ornamental rainforest understory species to 3m. Suits shady areas or indoor tub; attractive red berries reportedly edible.

Corymbia citriodora subsp. variegata SPOTTED GUM

Tall gum tree 10 – 40 metres. Cream flowers in groups on common stalk. Hardy on shallow stony soils on hills, ridges and mountain slopes. Flowers attract wildlife.

Corymbia intermedia BLOODWOOD

Medium tree to 10 metres with moderately dense canopy. White flowers in panicles December to May. Hardy in all soil types.

Corymbia tessellaris CARBEEN – MORETON BAY ASH

A medium tree with drooping canopy 10 -25 metres. White flowers in panicles Nov to Feb. Hardy and fast growing in all soil types but appears to favour those of sandy origin; resistant to strong winds and drought.

Cryptocarya glaucescens JACKWOOD

Rainforest tree to 25m. Hardy and fast growing, excellent creek revegetation species, black fruit attracts birds. Cabinet timber uses.

Cryptocarya laevigata GLOSSY LAUREL — GREY SASSAFRAS

Small handsome rainforest tree or large shrub ±6 metres. Bright red berries in autumn attract birds. Prefers shade, ample nutrients and moisture but will tolerate full sun.

Cryptocarya triplinervis BROWN LAUREL — THREE-VEINED CRYPTOCARYA

Small to medium bushy tree to 20 metres. Tiny yellowish-green flowers Oct – Jan. Fruit a bird-attracting, glossy black drupe. Hardy in exposed situations, especially coastal winds; prefers a sunny situation.

Cupaniopsis anacardioides TUCKEROO

Rainforest tree to 10m or more. Hardy and salt tolerant; good shade tree. Attractive foliage and orange edible fruit, attracts birds.

Cupaniopsis parvifolia SMALL-LEAVED TUCKEROO

Small tree of dry vine scrubs to ± 6m. Hardy in drier sites, reasonably fast with a little care. Small panicles of white flowers followed by bird-attracting orange berries. Excellent shade tree.

Cupaniopsis serrata SMOOTH TUCKEROO

Small understorey rainforest tree to 10 metres. Creamish/pink flowers in hairy panicles Aug-Jan. Fruit, a velvety-brown capsule with orange aril attracts birds; slow growing; lovely contrasting red new growth.

Dianella caerulea BLUE FLAX LILY

Clumping grass-like plant with blue flowers and blue berries. Grows in shade or partial sun. Hardy in most soils with adequate moisture.

Dianella brevipedunculata FLAX LILLY

Clumping grass-like plant to 1m. Small blue flowers in tangled spikes within the foliage in spring followed by dark blue fruits.

Diploglottis australis NATIVE TAMARIND

Rainforest tree to 10m. Prefers moist, sheltered site in sun or part shade, frequent watering and regular fertiliser speeds growth. Attractive tub plant. Edible but sour fruit attracts birds and bats.

Dissiliaria baloghioides HAUER

Medium to large rainforest tree ± 20m. Slow growing, needs protection when young, favours well-drained soil. Brown hairy flowers in autumn and woody capsules in spring. Excellent shade tree.

Dodonea triquetra NATIVE HOP BUSH

Shrub of open forest to 2m. Hardy and fast growing; suitable for moist or dry area. Clusters of papery - winged, lime green seed capsules turn purple with age; seeds are a food source for the Pale Headed Rosella.

Eucalyptus acmenoides WHITE MAHOGANY

Tall tree to 35m suited to well-drained loam or clay soils in most coastal regions where there is little frost. Excellent timber tree, suitable for shade, ornamental and windbreak planting.

Eucalyptus cloeziana GYMPIE MESSMATE

To 35m, very popular timber species. Grows very rapidly on rich coastal soils but will also make satisfactory growth on dry stony ridges. Good bee tree.

Eucalyptus microcorys TALLOW WOOD 'Koala Food Tree'

To 50m; very important timber species and valuable honey producer. Prefers warm temperate to subtropical climate but will also tolerate frosts and snow.

Eucalyptus robusta SWAMP MAHOGANY 'Koala Food Tree'

Tree of wallum areas to 25m. Heavy and durable timber. Suitable for coastal areas, particularly wet sites and heavy clay soils.

Eucalyptus racemosa SCRIBBLY GUM

Medium eucalypt 2-25m depending on soil fertility; appears naturally on coastal sands; tolerates periodic inundation; trunk displays characteristic 'scribbly' patterns; attracts rosellas, gliders and koalas.

Eucalyptus siderophloia GREY IRONBARK 'Koala Food Tree'

Tall erect gum ± 15 metres. Branches persistent to almost ground level; hard red timber used in construction; secondary food source for Koalas and Gliders; flowers attract Squirrel Gliders and lorikeets.

Eucalyptus tereticornis FOREST RED GUM – QLD BLUE GUM 'Koala Food Tree'

To 40m; valuable timber tree and honey producer. Smooth, sometimes shiny trunk; species of the moist soils, usually found on the alluvial flats adjacent to watercourses.

Eustrephus latifolius WOMBAT BERRY

Twinning climber to 1 metre. Pink or white with white-fringed curled hairs. Orange berries in late winter to early spring. Hardy in sun or full shade in well drained soils.

Ficus coronata CREEK SANDPAPER FIG

Rainforest creek tree to 10m with sandpapery leaves and edible fruit which attracts birds. Hardy, fast growing, prefers moist site. Full sun is preferable for a bushy appearance. Excellent for riparian planting.

Ficus fraseri SANDPAPER FIG — WHITE SANDPAPER FIG

Rainforest or vine scrub tree 6 — 15m. Edible fruit ripens to yellow, orange and black; attracts fruit eating birds. Hardy and fast growing in rich soil with plenty of moisture; sometimes briefly deciduous in cold areas.

Ficus virens WHITE FIG – BANYAN

Large strangling fig from northern Australia, develops many trunks which descend from upper branches; semi-deciduous, fast growing. White fruit attracts birds and other wildlife; suitable for large gardens or revegetation.

Flindersia australis CROWS ASH

Rainforest tree to 30m. Dense crown makes good shade tree. Hardy in a variety of situations with good drainage, can be slow growing at first. Partly deciduous when flowering, masses of white flowers and ornamental woody seed capsules. Excellent cabinet timber.

Glochidion sumatranum UMBRELLA CHEESE TREE

Graceful tree to +/- 15m. Cheeselike fruits and greenish flowers. Favours moist soils and tolerates less than perfect drainage.

Gmelina leichhardtii WHITE BEECH

Rainforest tree to 20m, valuable timber species. and moderately fast growing, briefly deciduous. Attractive bluish-purple fruit in summer. Excellent in tub when young.

Goodenia rotundifolia STAR GOODENIA

Prostrate perennial groundcover with runners; bright yellow flowers produced throughout the year; fruit a small round capsule with pale brown seeds; hardy and versatile in full sun or in an understorey situation.

Gossia hillii SCALY MYRTLE

Rainforest shrub or small tree with colourful new growth 6 – 12 metres. Small white flowers in spring. Shiny black edible bird-attracting berries in autumn; sun or part shade; prefers a moist, well-drained site; fairly slow growth makes it suitable as a tub specimen.

Grevillea robusta SILKY OAK

Rainforest tree to 25m. Hardy and fast growing in a variety of well drained sites, masses of golden-orange honey-laden toothbrush flowers in early summer which attract numerous birds and fauna. Excellent cabinet timber.

Guoia semiglauca WILD QUINCE

Small rainforest tree to 10 metres. Important for rainforest regeneration; Yellowish-green flowers appearing in spring. Fruit a bird-attracting green lobed capsule. Fast growing and versatile.

Hardenbergia violacea NATIVE SARSAPARILLA – FALSE SARSAPARILLA

Small scrambling prostrate or erect vine to 2m; bright purple pea flowers mostly in spring; hardy in a range of soil types; light shade to full sun; a light climber perfect for training up pergolas or fences; good ground cover.

Hovea acutifolia HOVEA

Bushy shrub of rainforest margins to 2m. Prefers moist semi-shaded areas but tolerates full sun and drier conditions. Masses of dark purple pea flowers along branches in spring.

Hymenosporum flavum NATIVE FRANGIPANNI

Large shrub to small rainforest tree 5-15m. Hardy and fast growing in a wide range of situations. Attractive perfumed white-yellow flowers in spring. Prune for a more compact plant.

Leptospermum liversidgei SWAMP MAY

Small attractive wallum shrub to 2m; citronella scented leaves discourage mosquitoes; masses of white to pinkish flowers spring and summer; extremely hardy; adaptable to wet or drier sites; full sun or semi-shade.

Leptospermum polygalifolium WILD MAY

Shrub of dry heath and open forest to 3m. Adaptable and hardy, masses of white flowers in spring. Prune after flowering to keep bushy. Suitable as a screen or windbreak.

Litsea leefeana BROWN BOLLY GUM – BOLLYWOOD

A small rainforest tree 15-20m; purple/black fruit attracts birds; hardy and fast growing in most well-drained soil types; prefers full sun to semi-shade; large ornamental leaves with attractive new growth; butterfly attracting.

Livistonia australis CABBAGE PALM

Attractive palm to 20m. Hardy and adaptable in full sun (once established) or part shade with adequate moisture. Massed creamy-white flowers and round black fruits in late summer. Suitable indoor plant.

Lomandra hystrix MAT RUSH

Grows in clumps to 1m. Hardy and adaptable, suits wet or dry areas, as creek/dam stabilisation or garden feature. Pale yellow perfumed flower spikes. Very difficult to distinguish from the widespread *L. longifolia*.

Lophostemon confertus BRUSH BOX

Tall tree of rainforest and open forest to 35m. Hardy, adaptable and fast growing dense attractive canopy; suits open situations. Excellent for revegetation and timber.

Mallotus philippensis RED KAMALA

Medium rainforest tree ± 10m. Yellowish flowers in racemes, June to Sept. Deep red fruit are covered with a powdery substance used to make dye for silk in India. Hardy in a range of conditions; full sun or part shade.

Melodinus australis MELODINUS

Climbing rainforest vine with panicles of tiny cream flowers summer to autumn; fruit a large yellow berry 4-6 cm long; prefers wet eucalypt or rainforest conditions. Succulent fruit is edible but milky sap may be toxic.

Melaleuca quinquenervia PAPERBARK

Swamp/wallum tree to 20m. Hardy and frost tolerant; excellent for wet sites. Whitish papery trunk with corky bark; masses of cream bottlebrush flowers attract wildlife.

Melaleuca nodosa PRICKLY-LEAVED PAPERBARK

Small shrub to 3m. Small white or yellow flowers in spring and summer. Hardy and adaptable in a variety of soils from sandy to clay; tolerant of salt spray; provides an excellent hiding place for small vulnerable tree frogs, the leaves being an excellent deterrent for predatory birds

Melaleuca pachyphylla WALLUM BOTTLEBRUSH

Open shrub to 2m with large red or lime green bottlebrush flowers. Hardy and adapts to wet or dry sites, shape is improved by pruning after flowering. Attracts birds.

Melaleuca salicina WEEPING WHITE BOTTLEBRUSH

Medium tree to 15m. Attractive pinkish new growth, prolific flowering, attracts birds. Tolerates moist sites, hardy in a variety of situations.

Melaleuca thymifolia PINK LACE — THYME HONEY-MYRTLE

Small spreading aromatic wallum shrub to 1 metre. Showy mauve-pink flowers throughout the year. Hardy and adaptable to diverse conditions; suitable for badly drained situations; frost tolerant; flowers best in full sun.

Melicope elleryana PINK EUODIA

Rainforest tree to 10m. Hardy and fast growing. Pioneer species for moist areas or creek banks, tolerates drier sites. Attractive clusters of pink flowers along branches. Black seeds attract birds.

Mischarytera lautereriana CORDUROY TAMARIND

Medium sized bushy rainforest tree with handsome ferny foliage 5 to 10m. Large sprays of small cream flowers autumn to spring; new growth red; prefers well drained soil, rich in organic matter; best in part shade.

Myrsine variabilis MUTTONWOOD

Large shrub or small tree to 5 metres. Small white flowers in winter. Masses of small magenta berries in spring. Lewin's Honeyeater is attracted to the fruit. Hardy and adaptable in a well-drained soil.

Oxylobium robustum GOLDEN SHAGGY PEA

Tall bushy shrub to 3 metres. Masses of orange flowers in spring. Hardy and adaptable for native gardens as an understory shrub.

Pandanus tectorius PANDANUS — BEACH SCREW PINE

Small, palm-like tree to 5 metres. Distinctive pineapple-like fruit-heads bearing large orange fruit. Hardy in most well-drained soils in full sun.

Pandorea jasminoides BOWER OF BEAUTY — SCRUB WONGA VINE

Vigorous rainforest vine or colourful ground cover. Large tubular white to pink flowers with a crimson throat; pruning can induce a compact habit; easy to grow in full sun or semi-shade.

Pararistolochia praevenosa – RICHMOND BIRDWING BUTTERFLY VINE

Vigorous rainforest vine – food host to the endangered Richmond Birdwing Butterfly; pinkish tubular shaped flowers with bright yellow inside from Sept – Dec; part sun to semi shade in moist well-drained soil.

Petalostigma triloculare QUININE BERRY

Shrub or small open forest tree to 5m. Extremely hardy and adaptable; full sun or part shade. Decorative orange/red fruit, non-edible; great subject for decorative screening in poor soils where other plants may fail.

Ptilidiostigma rhytispermum SMALL-LEAVED PLUM MYRTLE

Rainforest or margins shrub to 3m. Suitable as understory species. Full sun or semi-shade; very hardy but prefers ample moisture. Attractive white, bird-attracting flowers and shiny black fruit.

Podocarpus elatus BROWN PINE

Attractive rainforest tree 10-20m. Hardy in a variety of situations; can be slow growing at first. Plum-like edible fruit suitable for jams and jellies; fruit attracts birds. Cabinet timber uses.

Polyalthia nitidissima CANARY BEECH

Small rainforest tree usually ± 6m. Dense dark foliage with interesting fruit which may mature at different rates, with green, yellow, orange, red and black all on the one stalk. Slow growing.

Psychotria loniceroides HAIRY PSYCHOTRIA

Rainforest understory shrub to about 3m. Yellowish-white flowers in clusters from Feb to April. Fruit a small lemon-yellow berry attractive to birds, especially the Green Catbird; hardy, but prefers ample moisture.

Rhodamnia rubescens SCRUB TURPENTINE — SCRUB STRINGYBARK

Small rainforest tree 6— 10m. Fragrant white flowers in spring. Small red fruit maturing to black, attracts birds. Hardy and dependable in a large range of soil types, situations and temperatures.

Rhodomyrtus psidioides NATIVE GUAVA

Shrub or small dense rainforest tree 3 – 12m..Yellow/green edible fruit. Clusters of white or pink flowers in spring or summer. Fast growing and hardy in most situations; tolerates light frosts and clay soils.

Sannantha similis TWIGGY MYRTLE (*syn. Babingtonia similis & Baeckea virgata*)

Attractive shrub ±3m, prefers a moist well-drained site in a variety of soils. Branches tend to become arching with masses of flowers in spring and summer. Great screening shrub.

Sloanea australis MAIDEN'S BLUSH – BLUSH ALDER

Small to medium tree to 15 + m. Creamy-white flowers in spring; fruit a decorative bird-attracting yellowish-brown capsule; beautiful pink young toothed leaves; prefers a moist, shady sheltered situation; will not tolerate drying out; can be grown as a tub specimen.

Sterculia quadrifida PEANUT TREE

Handsome bushy rainforest tree 6-18m; fruit an eye-catching red capsule with shiny black seeds tasting of peanuts; can be semi-deciduous in colder climates; undemanding of soil type but requires good drainage.

Syncarpia glomulifera TURPENTINE

Tall hardwood tree to ± 25m. Fluffy white bird-attracting flowers in spring; distinctive woody fruit capsules; hardy and fast growing for shade or timber; adaptable to a variety of sites. Useful as a windbreak.

Syzygium francisii FRANCIS' WATER GUM — GIANT WATER GUM

Beautiful medium rainforest tree 10 — 25m. Small white flowers in summer. Ornamental purple edible fruit in large numbers Jan – March, attract wildlife. Tolerates full sun and light frost. Young leaves are brilliant red or pink and make this a superb container plant.

Syzygium luehmannii RIBERRY

Beautiful small rainforest tree 5 – 10m. Popular bushtucker tree with fluffy cream-white flowers and masses of edible magenta fruit in early summer; hardy and adaptable; attractive weeping foliage and outstandingly beautiful pink-red new growth. Can be pruned to keep low; excellent screen species.

Syzygium oleosum BLUE LILLY PILLY

Attractive rainforest tree ±8m. Dense dark green glossy foliage and distinctive, edible, pleasant-tasting purple/blue fruit make this a desirable species for bush-tucker gardens. Fast growing; prefers some moisture to do well in a variety of soils; great screen or windbreak tree.

Syzygium wilsonii ssp. wilsonii POWDERPUFF LILLY PILLY

Weeping understory shrub 2–3m; large wine coloured pom-pom flowers in spring; edible white fruit; striking pinkish/red new growth; best in partial shade with regular nutrients to promote leaf growth and flowering.

Tabernaemontana pandacaqui BANANA BUSH (*syn Ervatamia angustisepala*)

A dark leaved open shrub ± 2 metres related to the Oleander. White windmill-shaped flowers are followed by pretty, but inedible yellow banana-like fruit; hardy but prefers filtered light; sometimes defoliated by caterpillars.

Toechima tenax PITTED-LEAF STEELWOOD – BRUSH TEAK

Small rainforest tree 5 –8m in cultivation; cream white flowers April to June; bird-attracting orange/yellow fruit ripening in spring. Hardy in most locations; handsome dense foliage makes it a good screening subject.

Toona ciliata RED CEDAR

Well-known rainforest cabinet timber tree ± 20 metres. Tiny white flowers in spring; fast growing with attractive foliage and pink new growth; easily grown if given adequate moisture, fertilizer and shelter from frost in the first two years; young trees may suffer badly from attack by Cedar Tip Moth. Makes a tall handsome shade tree.

Viola hederacea NATIVE VIOLET

Perennial creeping herb; small white and violet edible flowers most of the year. Likes a moist well drained spot, full or part shade; tolerates sun but not dry conditions. Makes a beautiful groundcover.

Westringia species NATIVE ROSEMARY

Small spreading shrub 1.5m. Lilac flowers throughout the year; fine grey-green foliage. Extremely hardy, drought tolerant and quick growing; full sun preferred for compact growth. Excellent subject for shrubberies.

Wikstroemia indica TIE BUSH – BOOTLACE BARK

Small shrub 1-2 metres. Pale green/cream flower heads spring and autumn. Fruit a succulent bright red berry. (*Fruit and leaves toxic if eaten*): Hardy in all well drained soil types
